

Calibration of Tong Tester Training System

Nvis 8011

Calibration of Tong Tester Training System is designed to deliver the practical knowledge of measurement of electrical parameters and its calibration in real world. A Tong Tester is an instrument used for measuring current without any connection to a circuit. User can use and operate this equipment conveniently to measure a live conductor without causing any damage or power loss to it.

It provides in-depth knowledge of electrical measurements and its calibration using different measuring instruments. Product delivers complete understanding about calibration of tong tester with utmost safety.

Technical specifications

- Consists of a panel closed type.
- Single phase dimmerstat 4 Amp – 1no.
- 0 to 100 Amp current injecting transformer.
- Standard digital ammeter 100 Amp – 1no.
- Clamp meter – 1no.
- Panel size 2ft (height) x 2 ft (width) x 200mm (depth).
